Mining Dreams

OWN QUARRIES
21/22 COLLECTION

ABOUT US

WHO WE ARE

Our history with mining began in 2003, focusing on researching and clearing areas with interesting geological formations. Today, eighteen years later, we are a consolidated company in the extraction sector and we are living a new phase with the same passion as those who have just discovered the beauty of ornamental stones. In our daily lives, we put into practice our contemporary vision of production processes, combining experience, high technology, sustainability and innovation.

OUR MATERIALS

Our stones are widely accepted in the market, being sold all over the world. We currently have 10 large quarries of exotic materials, including schist, quartzite and granite.

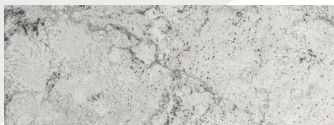

With unique beauty, our ornamental stones also have a large presence of crystals and feldspars, which makes them even more desirable.
